Einleitende Bemerkungen	11
<b>1 Einige Bemerkungen über Vorhersagetheorie und harmonische Analyse 30 Jahre nach Norbert Wiener</b>	<b>13</b>
<b>2 Wiener's Contributions to Generalized Harmonic Analysis, Prediction Theory and Filter Theory</b>	<b>33</b>
2.1 Generalized Harmonic Analysis (1930)	34
2.1.1 White light: the need for generalizing harmonic analysis	34
2.1.2 The WIENER classes $\mathcal{S}$ and $\mathcal{S}'$	36
2.1.3 Multiple harmonic analysis and coherency	39
2.1.4 Optical power, coherence and polarization	41
2.1.5 Signals with absolutely continuous spectra defined by random processes	44
2.2 Assimilation and consolidation (1930-1940)	47
2.2.1 Theory of stochastic processes	47
2.2.2 Ergodic theory	48
2.2.3 HARDY class functions	49
2.2.4 The HOPF-WIENER integral equation	49
2.3 Nonlinear prediction	50
2.3.1 On predictability in semi-exact sciences	50
2.3.2 Nonlinear prediction (elementary standpoint)	52
2.3.3 Nonlinear prediction (advanced standpoint)	53
2.3.4 Unsolved questions	55
2.4 Linear prediction theory	55
2.4.1 The linear prediction and filtering problems	55
2.4.2 Linear prediction and filtering (first period)	56
2.4.3 Linear prediction and filtering (second period)	59
2.4.4 Multivariate prediction	60
2.4.5 The continuation of WIENER's work on prediction	63
2.4.6 The ramifications of prediction theory	66
2.5 Filter theory	67

2.5.1	Linear filters. Realizability . . . . .	67
2.5.2	Periodic and pulse inputs . . . . .	68
2.5.3	Inputs of the class $\mathcal{S}$ . . . . .	70
2.5.4	BROWNIAN motion inputs . . . . .	72
2.5.5	On harmonic analysis and linearity . . . . .	74
2.5.6	The probe for a nonlinear filter . . . . .	75
2.5.7	FOURIER-HERMITE series of a function in $L_2[0, 1]$ . . . . .	76
2.5.8	The response of a nonlinear filter to white noise . . . . .	79
2.5.9	Synthesis and analysis of nonlinear filters . . . . .	80
2.5.10	Reproduction, learning, self-organization . . . . .	81
2.6	Frequently quoted works of NORBERT WIENER . . . . .	86
2.7	Other references . . . . .	86
<b>3</b>	<b>Sampling and Interpolation for Functions with Multi-Band Spectrum: The Mean-Periodic Continuation Method</b>	<b>91</b>
3.1	Introduction . . . . .	92
3.2	The WHITTAKER-SHANNON-KOTEL'NIKOV Sampling Theorem	95
3.3	Sampling and interpolation problem for the space $L_E^2$ in the RIESZ basis and frame setting . . . . .	98
3.4	Sine-type functions and exponential bases . . . . .	104
3.5	Mean-periodic functions. Mean-periodic extensions . . . . .	109
3.6	Mean-periodic continuation and Riesz bases . . . . .	112
3.7	A mean-periodic transfer operator and the CAUCHY problem for difference equations . . . . .	115
3.8	The case of multi-band sets in more detail . . . . .	118
3.9	An explicit calculation for a two-band spectrum with a short gap	122
<b>4</b>	<b>Geometric Analysis and Symbol Calculus: Fourier Transform Magnetic Resonance Imaging and Wavelets</b>	<b>133</b>
4.1	General introduction . . . . .	135
4.2	Fundamental principles . . . . .	142
4.3	Kernel distributions . . . . .	143
4.4	The synchronization . . . . .	148
4.5	Relaxation filtering . . . . .	169
4.6	FTMRI reconstruction . . . . .	171
4.7	Fast MRI techniques . . . . .	175
4.8	Outlook . . . . .	179
4.9	Summary . . . . .	180

<b>5</b>	<b>Wiener's Process, Global Optimization, and Knowledge Representation</b>	<b>187</b>
5.1	Introduction . . . . .	187
5.2	WIENER's process and LANGEVIN's equation . . . . .	190
5.2.1	WIENER's process . . . . .	190
5.2.2	LANGEVIN's equation . . . . .	191
5.2.3	Theorem . . . . .	192
5.2.4	Definition . . . . .	193
5.2.5	Ergodic theorem . . . . .	194
5.2.6	Proposition . . . . .	195
5.2.7	Theorem . . . . .	195
5.3	Global minimization of functions on EUCLIDEAN space . . . . .	195
5.3.1	Theorem . . . . .	197
5.3.2	Comments . . . . .	198
5.4	Artificial neural networks – density and complexity . . . . .	198
5.4.1	Definition . . . . .	201
5.4.2	Theorem . . . . .	201
5.4.3	Theorem . . . . .	202
5.4.4	An algorithm for parameter determination . . . . .	203
5.5	Programming of artificial neural networks . . . . .	203
5.5.1	Backpropagation . . . . .	204
5.5.2	Global optimization . . . . .	205
<b>6</b>	<b>On the Cybernetic Description of the Information Transfer by Chemical Synapses</b>	<b>209</b>
6.1	Introduction . . . . .	210
6.2	Short compilation of findings obtained and formal descriptions . . . . .	211
6.3	The model . . . . .	213
6.3.1	The partial chemical model . . . . .	213
6.3.2	The partial electric model . . . . .	217
6.4	Qualitative properties of the model . . . . .	221
6.5	The computer simulation of the model and the discussion of the results . . . . .	223
6.5.1	Miniature end-plate potential (mepp) . . . . .	224
6.5.2	End-plate potential in vivo (epp) . . . . .	224
